Quick Reference Guide

🔂 Administering a vaccine from a vial – using 2 needle technique

Always refer to package inserts for detailed instructions when preparing and administering vaccines. In general, follow the steps below:

Remove cap

Agitate

Cleanse stopper with alcohol pad and let dry

Assemble blunt fill/filter needle and syringe, then uncap needle

Puncture stopper at 90° with a blunt fill needle to minimize risk of catching internal wall of vial stopper. Note: For glass ampoules use a blunt filter needle

Invert vial and pull needle back so tip is in the liquid

Pull back on

plunger and draw

specified dose

Withdraw needle

Passively recap blunt fill or filter needle. Detach needle from syringe and immediately discard into an approved sharps collector after single use.

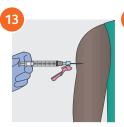

Assemble safety needle and syringe, then uncap needle

Tap syringe then push air out

Clean skin with alcohol swab

Inject patient with vaccine

Dispose of device and components

Before any patient contact, ensure you have the personal protective equipment (PPE) required by your institution's policies/procedures.

Remember: Follow your institution's policies/procedures for aseptic technique and skin preparation and for safe disposal of all medical waste.

Please consult Instructions for Use on the package or package insert for important safety information. This guide is not intended as a replacement for the detailed information contained in the IFU.
